

C11CL Live Site & Panel

Project Status Report

Date: June 24, 2026

This document details the operational status of the live C11CL Cricket League platform and its secure Administrative Panel.

Completed Tasks & Working Features

- ✓ Live Database Storage (Real-time Sync)**: All submitted user data from public forms is securely stored in the Aiven Cloud MySQL database and reflected instantly on the Admin Panel in real-time.
- ✓ Cookie-Secured Administrative Panel**: Unauthorized access to the `/Panel` directory is completely blocked. The system uses secure, cookie-based session verification to authorize logins.
- ✓ Standardized Contact Form**: Asynchronously captures queries, writes to the `contact\_queries` table, and displays a success confirmation via SweetAlert2.
- ✓ Standardized Registration Form**: Captures candidate details (including state/city dropdown population), stores them in the database, and redirects successfully to the payment/trial workflow.
- ✓ Email Subscription System**: Inserts visitor emails dynamically into the newsletter database from the global website footer.
- ✓ Careers & Application Portal**: Fully operational form allowing candidates to apply for operations/media roles, including secure PDF resume uploading directly to the server.
- ✓ Master Dashboard Reports**: Displays dynamic, real-time KPI metrics, including total registrations, paid/unpaid candidates, mail delivery counts, and cumulative revenue.
- ✓ Website Sections Integrity**: All main sections of the website (Latest News, Statistics, Elite Teams, Swiper reels, and navigation layout) are functional.

Pending Tasks & Upcoming Integrations

- 🕒 Email Sending Feature**: Integrate SMTP configurations (Hostinger/PHPMailer) to automatically fire transactional confirmation emails upon registration and subscription.
- 🕒 Razorpay Payment Gateway**: Bind the live Razorpay payment API to process fee collections dynamically from successful registrations.
- 🕒 Standardizing Minor Panel Pages**: Refactor remaining minor views and utilities in the administrative dashboard folder.
